

A deliberately long publication title for reviewing offline
bilingual reading, merged table cells, exact code, and cross-
page source locations

Section one: explicit structure

Every visible cell below belongs to the same authored source table.

State	Value
Saved	64

Table one. A complete two by two grid.

Deep subsection: exact long code

```
checkpoint = save_document(source_revision, translation_revision, expected_generation, immutable=True)
if checkpoint.outcome == "unknown":
    do_not_dispatch_a_second_request(checkpoint.request_id, preserve_reserved_budget=True)
else:
    publish_after_verifying_every_asset(checkpoint.artifact_directory, expected_hash=checkpoint.sha256)
```

This paragraph begins on page one and continues on page two.

The second source location is part of the same paragraph, not a new block.

Section two: merged cells and retained originals

State group	Combined columns	
	Left	Right
A	B	C

Table two. Row span two and column span two in a three by three grid.

Keep the original figure, code, formula, footnote, and reference.

Figure one. Three original colour patches.

$x + 1$

Read the authored note before treating this as evidence.

Authored fixture only. No parser accuracy or Provider quality is asserted.

Reference: local acceptance fixture, two original PDF pages.
